

UNABLE TO LOAD PROJECT SPEC

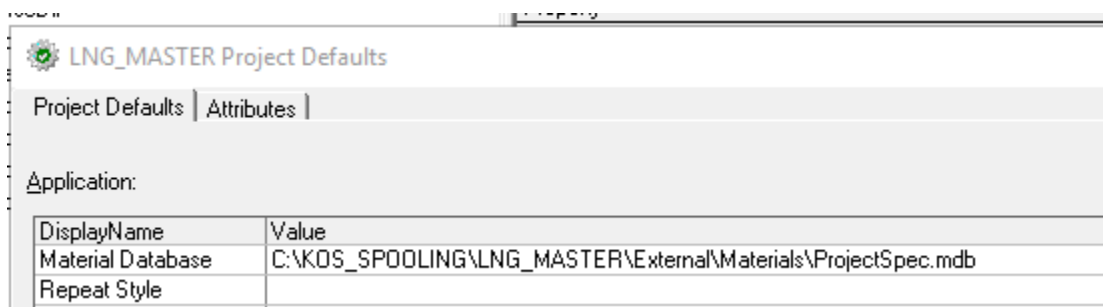

What to do if you see this error message after logging in for the first time to a newly imported project.

Click on OK.

Open IConfig > Select the Project > highlighted in blue as shown below > click on Project Defaults

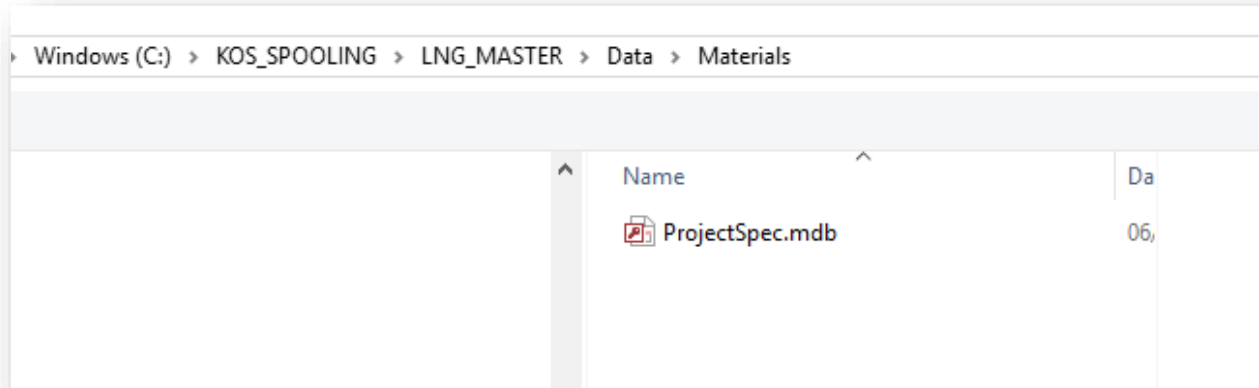

In the screen that opens click on the tab called Project Defaults to make it current.

Click inside the Value for Material Database to activate. > Click on the drop down arrow that appears on the right side.

In the SPECIFY FILE screen that opens > **browse to the project's Data\Materials folder**. Example shown below:

Select the ProjectSpec.mdb file > click on Open.

Screen closes and Project Defaults screen re-appears > click on OK at bottom of screen.

Click on File > Exit at top of screen to close Iconfig.

Check the results: In Spoolgen, click on Project > Project Log in and choose directory and project.

Error message about Project Spec does not appear this time.
